
The Fraunhofer-Gesellschaft (www.fraunhofer.com) currently operates 75 institutes and research institutions throughout Germany and is the world’s leading applied research organization. Around 29,000 employees work with an annual research budget of 2.8 billion euros.

At the Fraunhofer IEM in Paderborn (www.iem.fraunhofer.de), around 200 creative minds work on an interdisciplinary basis on the engineering of the future. With the latest methods, tools and innovative technologies, competitive solutions are created for industry.

What you will do

Regarding later change cases, traceable documentation and specific communication of design decisions are essential for the architectural development of Advanced Systems. However, developers are faced with the challenge of a lack of appropriate tools and methods for the systematic communication of design decisions. Collaboration platforms could be a helpful tool to improve the documentation and communication of design decisions. But here again methods are still missing. In this thesis, a concept for the communication of design decisions in MS teams shall be developed and implemented in a proto-typical way. The tasks include:

- Literature review on the topics of decision documentation, communication concepts and collaboration tools
- Development of a methodical communication concept
- Prototypical implementation

What you bring to the table

- You are studying (business) informatics, computer engineering or a comparable course of studies
- You have first experiences in the design of (software) architectures & MS teams
- You are motivated, creative, and like to work independently
